

ALLAIN & SON INC.

We have seen many changes in our 62 years and 4 generations in the electrical industry. None of these changes compares to the utilization of solar power. Imagine, producing your own electricity, heat and hot water from an alternative energy fuel source that is free, clean, efficient, reliable, quiet and inexhaustible. And the cost of this fuel will never increase. Add to this, some utility rebates coupled with federal and state tax incentives then installing solar and wind power becomes very attractive. Putting in alternative energy equipment gives us and our country, independence from fuel price increases, fuel shortages and also substantially increases our property values at the same time.

- Electrical Contracting
- Control Panel Building
- Infrared Thermal Imaging
- Electrical Engineering
- Solar Heat, Hot Water and Wind Energy
